COMPLEMENTARY INFORMATION

MD - Machinery : the design of these products allows its use as a component in a machine bound to a.m. standards requirements under the condition that its inclusion or assembly is satisfactorily performed by the manufacturer of the said machine.

EMC – Electromagnetic compatibility:

AC products are single phase or three phase asynchronous motors. Thus, these induction machines do not radiate radio frequency electric fields and they are not sensitive to high frequencies (IEC 60034-1 part 13-2-1 & 13-5-1). However, when they are connected to an electronic control device, the conformity must be verified by the manufacturer of the said machine (including motor and electronic controller).

EC products are motors defined and built to be in accordance with electro-magnetic compatibility.
